Purpose of Contact: Backfill of B559 Remediation Areas

Discussion

After removal of the process waste line in this area, the hotspot around sample location CD44-005 was excavated in an area approximately 20 by 24 feet and 4 ½ feet deep. Screening results from the bottom and sides of the excavation are all very low, well below action levels. Therefore, this area will be backfilled at risk, pending final analytical results.

A previous, hot spot associated with the process waste lines but nearer to the air tunnel was already backfilled. This area was approximately 6 feet deep, and had low levels of contamination slightly above the action levels prior to excavation. Screening results at this location were below action levels. This hotspot was backfilled at risk, pending final analytical results, to allow continued work on removal of the B559 structures.

An additional approximately two feet of soil was removed from the base of the excavation for the OPWL manway between 528 Pit and Building 559. The excavation is now approximately 9 feet deep. The screening level sample result for this excavation was far below action levels.
